

# Microsale POS

Simple, Complete Food Service System™

**A fully featured POS system  
that's designed for easy, everyday use.**

*Designed by food service professionals  
for food service professionals.*

Microsale is easy to use, flexible software that can be tailored to meet your needs. Every business is different. Our users are full-service and quick-service restaurants, cafeterias, bars, pizzerias, and delis. It has the power you want combined with the simplicity you need.

## Flexible

We offer a flexible environment that can be set up to meet your individual needs. Microsale began in 1989 with the ideas of a full-service and quick-service restaurant owner. It has grown and changed since then based on feedback from our users and the ever-changing needs of operating a restaurant in the 21st century. We can provide the system you need to run your business efficiently and effectively.

## Easy to use

Microsale requires minimal employee training. Our large buttons are easy to use, icons and colors help you organize and find buttons more quickly. Full-service restaurants can use a graphical floor display to both manage their tables and see an overview of the status of each.

## Powerful

Managers wanting tighter controls have the ability to restrict menu availability by job title or time of day. You choose what level of security to assign to employees based on their specific responsibilities. For better control over labor costs, you can also interface the employee scheduling module to the time clock.

## More

Magnetic ID cards can be used instead of ID or account numbers for features like Guest Gift Cards, Frequent Customer Discount Programs, and House Accounts, as well as for managers and employees. Microsale offers the option of processing credit cards over the internet or through a dialup connection to most processing networks. Our versatility is shown throughout the range of standard features.

### Standard Features
